

Split-conformal prediction (one-vs-rest): coverage validity and efficiency under recalibration

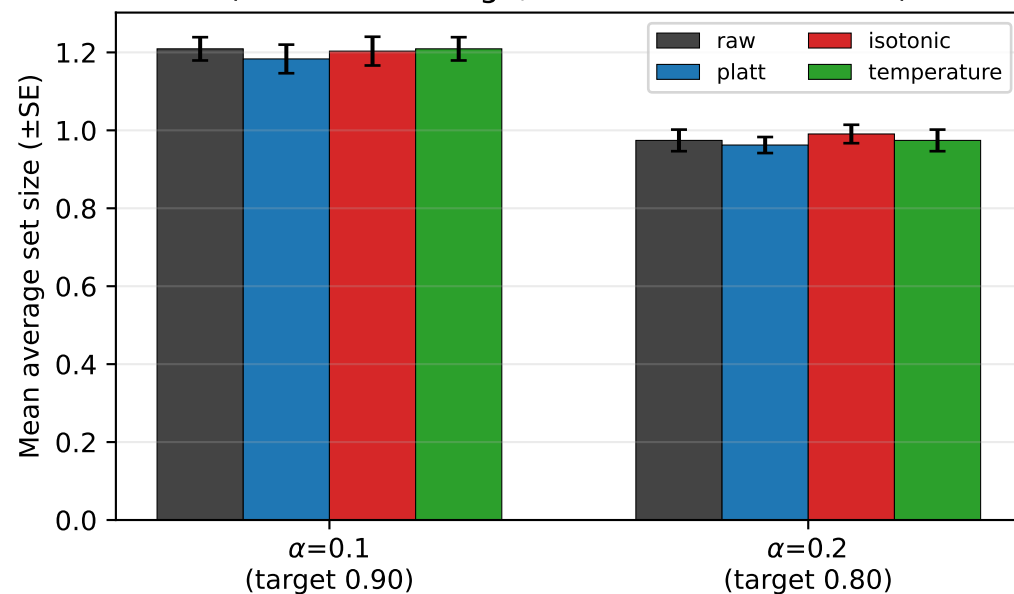

MI: coverage vs set size

(dashed = targets 0.90 / 0.80; points = each model×dataset× α)

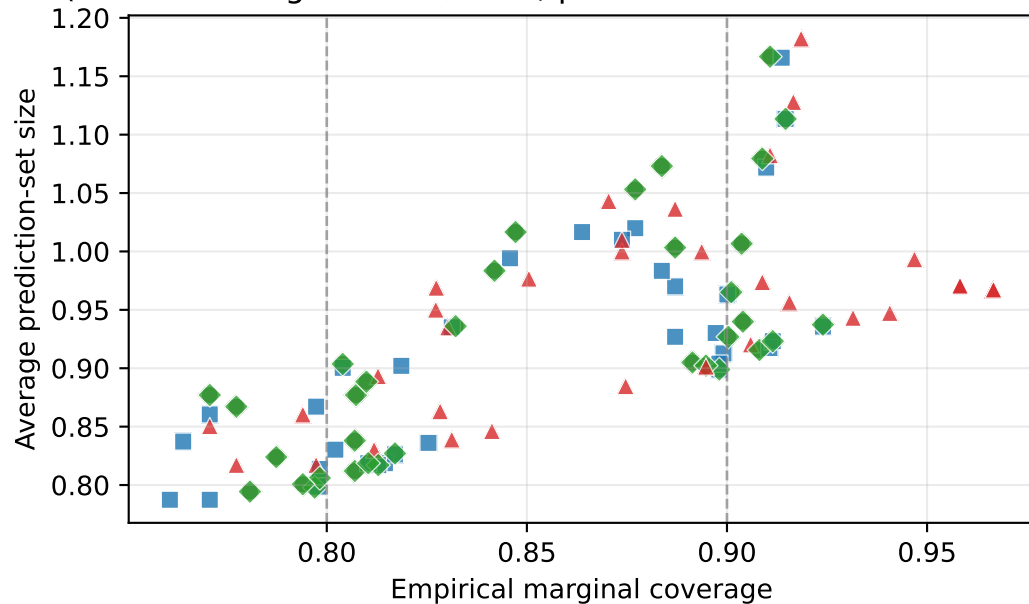

MI: conformal efficiency by method

(at fixed coverage; lower = more efficient)

AF: coverage vs set size

(dashed = targets 0.90 / 0.80; points = each model×dataset× α)

AF: conformal efficiency by method

(at fixed coverage; lower = more efficient)
